From first principles to production pipelines.

Data Engineer with over four years of experience designing **production-grade pipelines** and **cloud-native architectures** across insurance and finance. Currently architecting global datasets at **Chubb**, working across North America, EMEA, and APAC to enable data-driven **underwriting** and **risk assessment** at enterprise scale. Trained in **Theoretical Physics** at Imperial College London, bringing analytical depth to **system design**, **platform governance**, and the kind of engineering that earns trust over time.

< EXPERIENCE />

- **Data Engineer [Global Analytics]**

AUG 2025 - PRESENT

Chubb Insurance · London

 - Lead the design and build of Chubb's curated external company data asset across EMEA and Global, owning **entity resolution**, vendor data conflation, and data architecture across multiple commercial providers and millions of records.
 - Built a **probabilistic entity resolution pipeline** that deduplicates and links records across providers with a **300x runtime improvement** over the existing production system, from vendor profiling through to match logic and ground truth validation.
 - Developed a full-stack **automated pipeline dashboard** using Next.js, FastAPI, and Tailwind for reporting, monitoring, and stakeholder visibility across data workflows.
- **Data Engineer [EMEA Analytics]**

NOV 2024 - MAY 2025

Chubb Insurance · London

 - Refactored a **30,000-line legacy pipeline** from monolithic notebooks to modular PySpark, reducing runtime from 270 minutes to 45 minutes and introducing Git version control.
 - Delivered end-to-end data products supporting **AI-driven risk modelling** and virtual portfolio analysis, collaborating closely with data scientists and ML engineers.
 - Shaped platform governance during **Azure migration**, implementing Unity Catalog and automating critical pipelines with Kafka and Databricks Workflows.
- **Data Engineer**

JUN 2025 - AUG 2025

AXA Insurance · London · *via Kubrick Group*

 - Built an automated **Deletion and Retention framework** ensuring GDPR compliance across all layers of a medallion architecture, tested to guarantee zero accidental deletions.
 - Created **architectural documentation** for complex metadata-driven infrastructure, adopted by both consultant and internal engineering teams.
- **Junior Data Engineer**

OCT 2022 - NOV 2024

Quilter Financial Planning · London · *via Kubrick Group*

 - Designed a custom **PySpark CDC solution** on Databricks that reduced data volumes by 85% and cut file transfer times from over an hour to 15 minutes.
 - Architected a **JSON-driven contract system** enabling dynamic toggling of data file production without code changes, increasing business agility.
 - Led **sprint planning and backlog grooming** across cross-functional squads, driving alignment between product managers, analysts, and engineers.
- < 🛠️ PROJECTS />

The Daily Canon

OCT 2023 - PRESENT

Founder · thedailycanon.org

 - Built and launched a literary mobile app delivering one curated work of literature daily. **Featured on the App Store**, with 6,000+ downloads and a growing base of premium subscribers.
 - Developed the full stack independently using **Next.js**, **TypeScript**, **Supabase**, and Capacitor for native iOS, with proceeds supporting **Book Aid International**.
